NBNA Population Health Webinar
The Future is Now: AI's Role in Transforming Healthcare and Nursing

Description:

- This one-hour virtual presentation offers a comprehensive exploration of artificial intelligence in the healthcare sector, with a special focus on its impact on nursing care, education, and the broader implications for equity and civil rights.

Objectives:

- Understand the role of AI in modern healthcare and its potential to advance health equity.
- Discuss key aspects of President Biden's Executive Order on AI, emphasizing equity and civil rights.
- Explore how AI can be utilized to reduce health disparities, especially among communities of color.
- Recognize the influence of AI on nursing practices and education with a focus on culturally competent care.
- Apply the AAAS decision tree for responsible AI application, ensuring equitable and ethical use in healthcare.

Webinar Presenter:
Dr. Lauren Edgar DNP, MSN-Ed., FNP
Population Health Sub-Committee
National Black Nurse Association
Southern Nevada Black Nurse Association

Dr. Edgar has dedicated her 17 years of experience in acute care nursing leadership, nursing education, and advocacy for rare diseases to reducing health inequities among people of African ancestry in the context of health and wellness. Dr. Edgar has previously collaborated with AI and healthcare researchers, and recently completed a Leadership Fellowship with the National Institutes of Health's Artificial Intelligence/Machine Learning Consortium for Health Equity and Researcher Diversity (AIM-AHEAD). She served for two terms as president of the Southern Nevada Black Nurses Association and is now a joint Postdoctoral Fellow with the National Institutes of Health's National Human Genome Research Institute and the Food and Drug Administration's Office of Minority Health and Health Equity.
